Deep-dive into Tableau
Part 6 - Parameters

Create Parameter

- A parameter is a workbook variable such as a number, date, or string that can replace a constant value in a calculation, filter, or reference line.

- Steps:
    1. Create
    2. Show Control
    3. Create calculated field
    4. Use

Use Cases for Parameter

1. Top N

2. Moving average

3. Date Range

4. Sort Stacked bar chart

5. Filter unrelated data source in dashboard

6. Dynamic dimension and measure
